SGM3803 90% Efficient Synchronous Step-Up Converter with 200mA Negative Charge Pump Inverter

GENERAL DESCRIPTION

The SGM3803 is a constant frequency, current mode, synchronous step-up switching regulator with 200mA negative charge pump inverter which generates an unregulated negative output voltage from an input voltage range of 1.4V to 5.5V. The device is typically used to generate +5V and -5V from battery.

High switching frequency minimizes the sizes of inductor and capacitor. The device requires only three external capacitors for a complete DC/DC charge pump inverter. Integrated power MOSFETs and internal compensation of boost DC/DC make the SGM3803 simple to use and optimized for compact solutions.

The negative charge pump inverter of the SGM3803 is capable of providing 200mA output current. The typical conversion efficiency exceeds 80% over a wide output current range.

The SGM3803 boost DC/DC enters the power-save mode at light loads to maintain high efficiency. Anti-ringing control circuitry reduces EMI concerns by damping the inductor in discontinuous mode. The SGM3803 boost DC/DC provides true output disconnect, thus allowing V_{OUT1} to go to zero volt during shutdown without drawing any current from the input source. The SGM3803 supports 1.8V logic for control.

The output voltage of the boost DC/DC can be programmed by an external resistor divider. Boost DC/DC and negative charge pump inverter have independent enable control.

The device is available in a TDFN- $3\times3-12L$ package. It operates over an ambient temperature range of $-40^{\circ}C$ to $+85^{\circ}C$.

FEATURES

Boost DC/DC

- Input Voltage Range: 2.7V to 5.5V
- Up to 5.2V Adjustable Output Voltage
- Output Voltage Clamping: 6V
- 90% Efficient Synchronous Boost Converter
- Quiescent Current: 30µA (TYP)
- Less than 1µA Shutdown Current
- Improved Light Load Efficiency with Power-Save Mode (PSM)
- Load Disconnect during Shutdown
- Low Reverse Leakage Current when V_{OUT1} > V_{CC}
- 1.8V Logic on EN1 Pin for Control
- Over-Temperature Protection

Negative Charge Pump Inverter

- Input Voltage Range: 1.4V to 5.5V
- 200mA Output Current Capability
- Only Three Small 2.2µF to 4.7µF Ceramic Capacitors are Required
- Low Quiescent Current in Active Status: 1.5mA (TYP)
- Switching Frequency: 950kHz (TYP)
- 1.8V Logic on EN2 Pin for Control
- Integrated Active Schottky Diode for Startup into Load

APPLICATIONS

Single-Cell Li Battery Powered Products Portable Audio Players Cellular Phones Personal Medical Products

Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

ABSOLUTE MAXIMUM RATINGS

Input Voltage Range on SW, OUT1, V	CC, FB, EN1, EN2, IN
	0.3V to 6V
OUT2	6V to 0.3V
C _{FLY}	0.3V to V_{OUT2} - 0.3V
C _{FLY+}	0.3V to V_{IN} + 0.3V
Junction Temperature	+150°C
Storage Temperature Range	65°C to +150°C
Lead Temperature (Soldering, 10s)	+260°C
ESD Susceptibility	
HBM	4000V
MM	200V

RECOMMENDED OPERATING CONDITIONS

Operating Temperature Range	40°C to +85°C
-----------------------------	---------------

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

PIN CONFIGURATION

PIN DESCRIPTION

PIN	NAME	FUNCTION
1	VCC	Boost Converter Supply Voltage.
2	OUT1	Boost Converter Output.
3	FB	Boost Converter Output Voltage Feedback Pin. An external resistor divider programs the output voltage.
4	OUT2	Charge Pump Inverter Power Output with $V_{OUT2} = -V_{IN}$.
5	IN	Charge Pump Inverter Supply Input. Connect to an input supply in the range of 1.4V to 5.5V.
6	EN2	Charge Pump Inverter Enable Control. When EN2 is biased high, charge pump is in active mode. When EN2 is biased low, charge pump is in shutdown mode.
7	GND2	Ground of Charge Pump Inverter.
8	C _{FLY+}	Charge Pump Inverter Positive Terminal of the Flying Capacitor.
9	C _{FLY-}	Charge Pump Inverter Negative Terminal of the Flying Capacitor.
10	GND1	Ground of Boost DC/DC.
11	SW	Boost and Rectifying Switch Input.
12	EN1	Boost Converter Enable Input. When EN1 is biased high, boost converter is in active mode. When EN1 is biased low, boost converter is in shutdown mode.

ELECTRICAL CHARACTERISTICS Boost DC/DC
